

Land and Primary  
Industries  
Network  
DECARB HUB

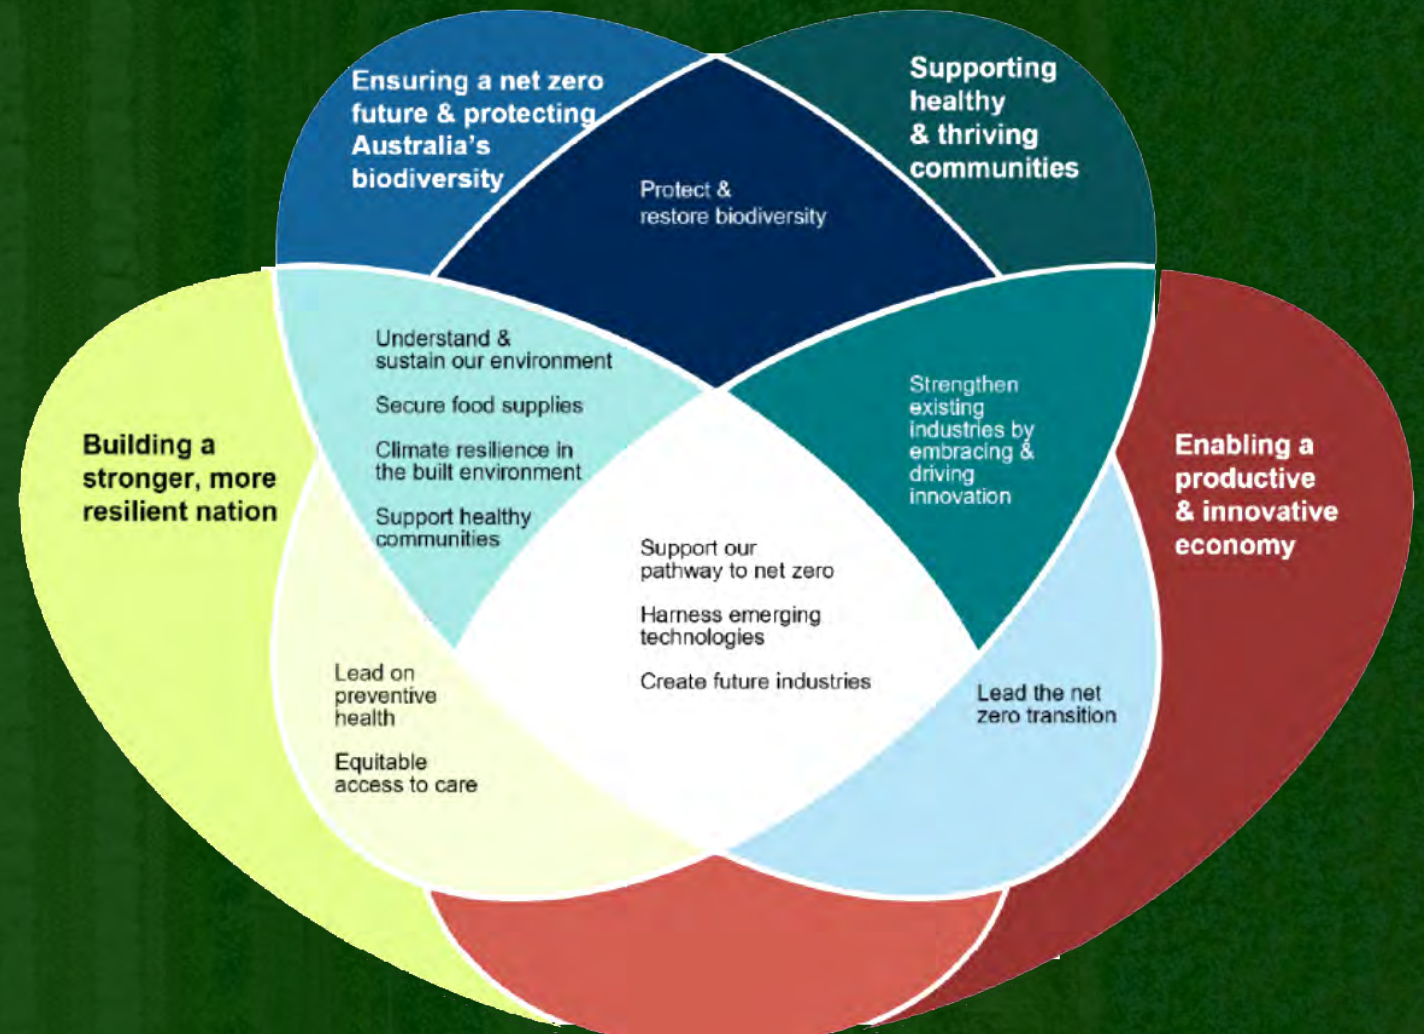

Proudly funded by

# Land and Primary Industries Network

Targeted land management offers the potential to **combine carbon abatement with co-benefits** for nature, the economy, and social well-being.

# Partnerships across the innovation ecosystem

# LPI priority focus areas

1. Accelerating adoption of sustainable practices in productive landscapes
2. Harnessing nature-based solutions: native and semi-natural ecosystems
3. Embedding sustainable bio-products in primary industry production and supply chains
4. Frontiers in carbon sequestration
5. Embedding low carbon and nature-based solutions in vibrant cities
6. Circular economy regional exemplars

→ Frame strategy and activities for 2023-2026.

→ Identified through co-design among LPI partners, industry and government

→ Basis for prioritisation of activities and allocation of resources to proposed projects

# LPI Collaborative Grants 2023 Round

(\$1M total allocated across 11 projects)

Project	Lead and partner orgs	Priority Focus Area (Primary)
<i>Low-Carbon and Bio-Based Emergency Housing System for Northern NSW</i>	<b>NSW DPI</b> , Container of Dreams (CoD), SCU, UoQ	3. Embedding sustainable bio-products in primary industry production and supply chains
<i>Quantification of carbon sequestration in urban forests</i>	<b>WSU</b> , City of Sydney	5. Embedding low carbon and nature-based solutions in vibrant cities
<i>Social License for Net Zero Industries in Carbon-Heavy Regions: Industrial Hemp in Lithgow</i>	<b>WSU's</b> Maldhan Ngurr Ngurra – the Lithgow Transformation Hub and partners	5. Embedding low carbon and nature-based solutions in vibrant cities
<i>Assessing carbon sequestration in saltbush plantations</i>	<b>UNSW</b> , NSW DCCEEW, Grazing Management Systems (GMS)	2. Harnessing nature-based solutions: native and semi-natural ecosystems
<i>Optimising pig diets for decarbonisation</i>	<b>NSW DPI</b> , Australian Pork Limited	1. Accelerating adoption of sustainable practices in productive landscapes
<i>Evaluating carbon abatement opportunities for biomass from marginal, less-productive lands in NSW</i>	<b>Institute for Sustainable Futures (UTS)</b> , NSW DPI, CAIK-UTS, CO2e Partners	4. Frontiers in carbon sequestration
<i>Extracting Biomaterials/Biopolymers for use in wider Clean Economy and Decarbonisation processes*</i>	<b>GreenChem Polymers</b> , NSW DPI	3. Embedding sustainable bio-products in primary industry production and supply chains
<i>Waste heat recovery and thermal energy sharing towards a Circular Economy</i>	<b>UoW</b> , GXA, Bega Group	6. Circular economy regional exemplars
<i>Satellite-Based Methane Emission Mapping, Tracking and Benchmarking: Cattle and Wetlands</i>	<b>UNSW</b> , UoW, University at Buffalo, SCU, DPI, DPE, Moffatt Falls, and Aurecon.	1. Accelerating adoption of sustainable practices in productive landscapes
<i>Advancing Sustainable Practices in Food Delivery</i>	<b>WSU</b> , Box Divvy	5. Embedding low carbon and nature-based solutions in vibrant cities
<i>Invasive native vegetation to biofuel – decarbonisation with co-benefits</i>	<b>UNE</b> , AusBioEnergy, DCCEEW, Armidale Regional Council, Northern Tablelands and NorthWest LLS	1. Accelerating adoption of sustainable practices in productive landscapes

# LPI Collaborative Grants 2023 Round

(\$1M total allocated across 11 projects)

Waste heat recovery and thermal energy sharing towards a Circular Economy

Land and Primary Industries Network  
 Bega Group  
 GEOEXCHANGE

Extracting Biomaterials/ Biopolymers for use in wider Clean Economy and Decarbonisation processes

Land and Primary Industries Network  
 NSW Government  
 GreenChem Polymers

Evaluating carbon abatement opportunities for biomass from marginal, less-productive lands in NSW

Land and Primary Industries Network  
 UTS  
 NSW Government  
 UTS  
 Institute for Sustainable Futures

Optimising pig diets for decarbonisation

Land and Primary Industries Network  
 NSW Government  
 Pork

Assessing carbon sequestration in saltbush plantations

Land and Primary Industries Network  
 UNSW  
 NSW Government  
 Grazing Management Systems

Social License for Net Zero Industries in Carbon-Heavy Regions: Industrial Hemp in Lithgow

Land and Primary Industries Network  
 WESTERN SYDNEY UNIVERSITY

Quantification of carbon sequestration in urban forests

Land and Primary Industries Network  
 WESTERN SYDNEY UNIVERSITY  
 CITY OF SYDNEY

Low-Carbon and Bio-Based Emergency Housing System for Northern NSW

Land and Primary Industries Network  
 NSW Government  
 UTS  
 Southern Cross University  
 THE UNIVERSITY OF QUEENSLAND

Invasive native vegetation to biofuel – decarbonisation with co-benefits

Land and Primary Industries Network  
 UNE  
 NSW Government  
 ARMIDALE  
 Local Land Services

Advancing Sustainable Practices in Food Delivery

Land and Primary Industries Network  
 WESTERN SYDNEY UNIVERSITY  
 BOX DIVVY

Satellite-Based Methane Emission Mapping, Tracking and Benchmarking: Cattle and Wetlands

Land and Primary Industries Network  
 UNSW  
 University of Wollongong  
 NSW Government  
 Southern Cross University  
 aurecon  
 australian cattle

# Emissions reduction roadmap for NSW land and primary industries

- Ongoing 1-year project, led by NSW Department of Primary Industries and LPI Network
- Extensive industry consultation
- Will generate a roadmap for NSW land and primary industries sectors to transition to a low emissions future, across 16 proposed solutions and sub-sectors (e.g. blue carbon, novel bioproducts, mitigation of livestock methane emissions)

## INPUTS

- **Partnership:** 1-yr collaboration between NSW government and research sector
- **Subject matter experts** for 16 solution areas
- **Integral consultation with industry**
- **Life-cycle analysis** of carbon footprint
- **Cost-benefit analysis** of emissions abatement and landholder co-benefits

## OUTPUTS

- **The roadmap** (state-of-play understandings)
- **Studies** on abatement potential of individual mitigation options, description of the methods, and marginal abatement costs

## OUTCOMES

- **Guiding government decision making**
- Building capacity across the land & primary industries sector

## EXPECTED IMPACT

A mature and collaborative emissions reductions community of land and primary industries sector players in NSW

# Evidence-based decision-making and planning

## Next-generation measurement, reporting and verification frameworks:

- **Leverage cutting-edge models** used in climate impacts research and global science-policy work, complementing Kyoto-era methods (such as FullCAM)
- Make **better use of data sets** (e.g. flux tower networks, global change experiments) beyond vegetation carbon mass and growth rates
- Provide **richer capability** for planning, implementation, monitoring and management of carbon farming and nature repair projects, for landholders and service providers
- Address **'why' (attribution) and 'how' (management)** questions
- **Address future risks** including climate variability and change
- **Assists government** in implementation and delivery of credit payment schemes and broader land use planning

# Agrisolar CRC Bid

Our mission

**Inform wholistic system designs that enable large-scale uptake of Agrisolar, ensuring climate resilience for farmers and food security for Australians**

Our desired outcome:

A full exploration of Agrisolar via CRC matures the decarbonisation community, grows the economy through innovative PV solar usage, and contributes to Net Zero emissions through application.

# Agrisolar CRC: Context

- As utility-scale solar projects demand greater rural land areas, a growing need exists to **identify and demonstrate multi-land use solutions** - both from a productive land and a biodiversity perspective.
- Such arrangements have **succeeded in America, Europe and Asia** but need to be fully explored in Australia and shaped systematically to allow for commercial-scale adoption.
- Existing debates have raised the issue of **utility-scale solar as a threat to agricultural production** and predominantly treated **marginal land as the only viable option** for solar installations.

# Why a CRC?

After industry consultation and review of existing research we have determined that **to achieve adoption of Agrisolar at commercial scale, innovation is required in the following general areas:**

- Win-win approaches for nature positivity in relation to agrisolar installations;
- drive the profitability of diverse agricultural outputs beneath, between and surrounding solar arrays; and,
- optimise the possibility of community-led solutions to policy creation and remove legal, financial, and inequitable barriers to participation in agrisolar farming.

**A CRC is the most efficient, proven vehicle for success that we have identified**, and we are working towards having shovel-ready projects by submission.

## PROPOSED COMMERCIAL-SCALE R&D AGRISOLAR SITES

### Lake Cargelligo, NSW - Cygnus Agriculture & Graphite Energy

Circularity - Green energy production & storage - Biomass crop - DA Approval in place

### Richmond, NSW – Western Sydney University & Sunbiosys

Large-scale R&D site proposed for Stage 2 Hawkesbury Agritech Precinct – Master Planning in progress
